

Adhokshaj Wategaonkar

Product Manager with 3+ years driving product development for enterprise AI platforms. Specialises in AI-native workflows, cross-functional team leadership, & rapid feature delivery in fast-paced B2B SaaS environments.

EXPERIENCE

Beacon.li, Bengaluru, Hyderabad — Associate Product Manager

October 2025 – June 2026

- Owned product requirements & vendor integration strategy for a multi-provider LLM gateway (OpenAI, Anthropic, Gemini, Grok), defining **fallback logic, error classification, & retry behaviour** to ensure **higher than 85%** request completion rates across enterprise workloads.
- Owned the end-to-end **redesign** of Beacon's agent chat experience – **prototyping the streaming interface** from scratch to define which elements surface in real time, & designing a progressive-disclosure model that lets users expand from an agent's response into its reasoning rationale & underlying tool-call traces, giving users layered control over how deeply they inspect agent behaviour.
- Represented product in platform architecture reviews for a scalable agent orchestration system – making scoped trade-off calls between configurability & reliability that **directly influenced routing design, tenant isolation boundaries, & feature rollout sequencing**.
- Managed ongoing product touchpoints with **enterprise clients** – leading structured feedback sessions, translating deployment pain points into actionable specs, & maintaining **alignment between client expectations & platform release commitments**.
- Developed a **cost attribution framework** mapping AI inference spend to tenant, agent, & workflow levels – establishing the product foundation for **usage-based pricing models & client-facing budget governance** features.
- Drove product delivery operations from zero to a stable **bi-monthly release cadence** – establishing sprint rituals, cross-team dependencies, & stakeholder review processes that sustained **95% on-time delivery** for all major milestones across 15 sprints.
- Reduced concept-to-prototype turnaround by 60%+** by embedding AI tooling – **Claude, Cursor, & ChatGPT** directly into PRD drafting, UX iteration, & engineering handoff workflows, compressing a **multi-week cycle to under a week per feature**.

GalaxEye Space, Bengaluru — Associate Product Manager

March 2024 – September 2025

- Led drone-mounted SAR analytics software from concept through government trials as product co-owner – defining geospatial insight & data analytics requirements, **undercutting the project timeline by 20%** while maintaining defence-grade reliability requirements.
- Completely **owned cross-portfolio market strategy** across GalaxEye's defence & commercial product lines – conducting structured competitive analysis & buyer interviews across government, agri-tech enterprises, & defence agencies to reposition products for distinct segments & directly inform feature prioritisation & launch sequencing.
- Designed the end-to-end demo experience** for defence and commercial stakeholders – owning the information architecture and narrative flow of how complex SAR capabilities were presented, driving a **25% lift in qualified partnership**

SKILLS

Product | Vibecoding | Design

GTM | Strategy | Positioning

Analytics | ML | Data Science

User Story | Prototyping

TOOLS

Claude Cowork/Cursor

Figma/Framer/Canva

Jira/ClickUp

Metabase/MixPanel

Sheets/Excel/SQL

PROGRAMMING

Python

C++

SQL

leads and directly feeding GalaxEye's commercial pipeline.

- Ran **competitive analysis and 20+ buyer/user interviews** across government procurement and defence – turning discovery insights into repositioning and feature prioritisation across two product lines.
- Represented GalaxEye's product team at Aero India 2025 & the Indian Army's HIMTECH Symposium – engaging defence leadership & Army officials to **validate capability requirements, surface operational use cases, & translate field feedback** into product intelligence that informed roadmap positioning across defence verticals.

EarthID, London(remote) — *Product Manager*

July 2023 – February 2024

- Owned the full product lifecycle across **PM & UX functions** – leading user research, wireframing, & prototyping in Figma while managing sprint delivery & accelerating feature iteration cycles.
- Defined product requirements for **verifiable credentials & zero-knowledge proof** integration, enabling privacy-preserving digital KYC flows that reduced onboarding friction for regulated identity verification use cases.

L&T Technology Services, Bengaluru — *SDE*

December 2021 – December 2022

- Built and deployed ML models on Azure to **improve operational efficiency across L&T power plants** – developing predictive pipelines that surfaced maintenance and load-management insights for plant operations teams.

EDUCATION

MIT School of Engineering, Pune — *B.Tech, Computer Science & Engineering*

August 2017 – September 2021

BTech in CSE Core & specialisation in Machine Learning + Data Science.
